PROJECTS

Multiple Disease Prediction System | Python, Machine Learning, Data Analysis | September 2023 - December 2023
- Built multi-class diagnostic classifier on 10k+ patient records using stratified 80/20 split and 5-fold cross-validation; best model achieved F1=0.84 outperforming a logistic regression baseline by 9 points.
- Handled class imbalance via class weights; evaluated Random Forest and SVM with precision/recall analysis.
- Delivered a Tableau dashboard with cohort filters enabling clinicians to explore risk segments and feature importance.

Dental Disease Prediction | Python, Machine Learning | January 2025 - March 2025
- Developed transfer-learning pipeline on dental images with augmentation, early stopping, and class-balanced sampling; achieved F1=0.81 on a held-out test set.
- Standardized preprocessing , curated label schema (cavity, gingivitis, periodontitis).
- Packaged inference as a lightweight API (FastAPI) with batch processing to keep median latency under 80 ms on CPU.

StraySafe Application | Python, Machine Learning | June 2023 - August 2023
- React Native + Node/Mongo app with geofenced alerts; risk model ROC–AUC=0.86 prioritized rescues.
- Streamlined NGO workflows, ~40% faster coordination.
